eSHIFT
Die elektrische Schaltung

Fließend fahren im richtigen Gang
Mit eShift sind Gangwechsel einfacher und effizienter – und sie passieren fast von allein. Je nach eShift Variante kannst du selbst schalten oder eShift schaltet automatisch so, dass du in deinem individuellen Wohlfühlbereich gleichmäßig trittst. Für jeden gibt es die passende Lösung: Um dies zu ermöglichen, arbeiten wir mit starken Schaltsystem-Partnern zusammen.

Ride smoothly in the right gear
With eShift, gear changes are easier and more efficient – and they happen almost by themselves. Depending on the eShift variant, you can shift gears yourself or eShift shifts automatically so that you pedal evenly in your individual comfort zone. A suitable solution for everyone: We work together with strong shifting system partners to make this possible.

STIFFNESS

Mehr Volumen im Tretlagerbereich sowie die Querschnittsvergrößerung der antriebsseitigen Kettenstrebe sorgen dafür, dass jedes Watt in Vortrieb umgewandelt wird. Bei der Kettenstrebe konnte die Seitensteifigkeit im Vergleich zum Vorgängerrahmen um 48% erhöht werden - KTM bleibt Benchmark.

More volume in the bottom bracket area, as well as an increase in the cross-section of the drive-side chainstay, ensures that every watt is converted into propulsion. In the chainstay, the side stiffness could even be increased by 48% compared to the previous frame.

MWYW SHOCK MOUNT

Das Oberrohr des Evo III beherbergt die verdeckte Kabelführung für den Dämpfer-Remote. Das spezielle Design sorgt dafür, dass jegliche Dämpfer unterschiedlicher Hersteller montiert werden können, unabhängig von verschiedenen Remote- oder Rebound-Positionierungen.

In the top tube of the Evo III, there is a concealed cable routing for the shock remote. The special design ensures that any shock from different manufacturers can be mounted, regardless of various remote or rebound positioning.

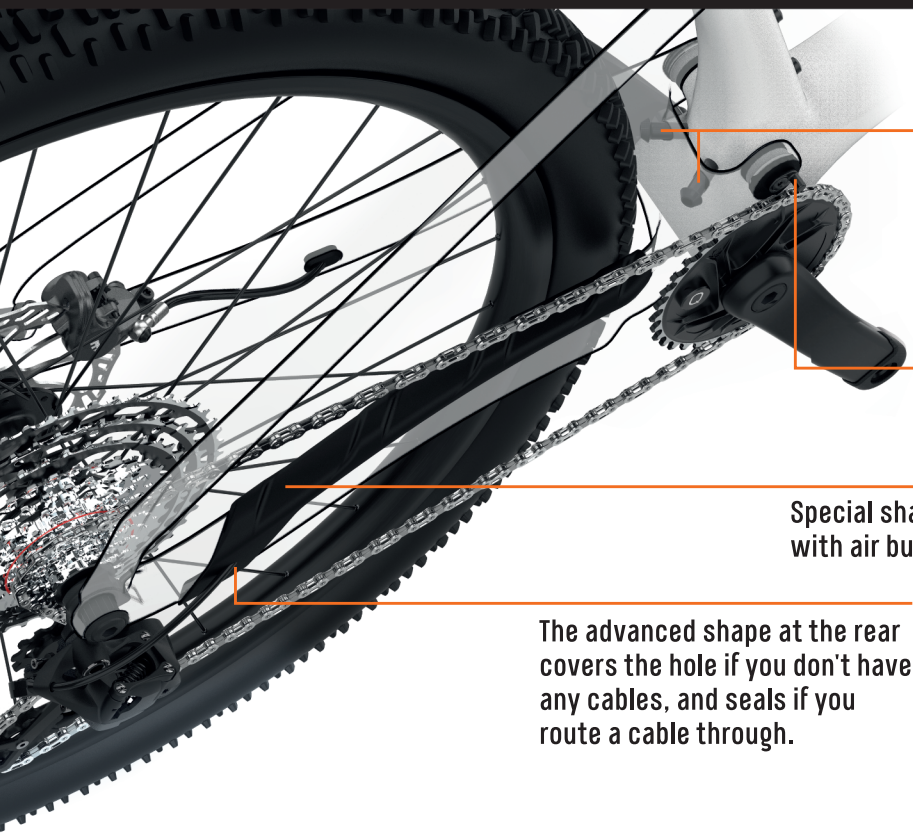
INSIDE
FRAME

SUBMARINE MAIN-PIVOT

Umwelteinflüsse reduzieren die Lebensdauer von Wälzlagern im harten MTB-Einsatz weitaus mehr als mechanische Belastung. Das SUBMARINE MAIN PIVOT Konzept riegelt die Hauptlager der KTM Scarp hermetisch ab. Im Innern befinden sich Flanschlager, die mit 20% mehr Schmierstoff gefüllt sind und mit Heavy-Contact-Sealings ausgestattet sind. Diese Flanschlager erleichtern im Fall der Fälle zudem den Lagerwechsel erheblich. Nach außen hin wird das Lager zusätzlich noch mit einer Kappe aus Fluorkautschuk gegen Umwelteinflüsse geschützt. Zum Hauptrahmen hin gewährleisten ein Radialwellendichtring und ein Spacer mit integriertem O-Ring höchste Dichtheitswerte. Auch die Hauptlagerschraube wurde überarbeitet. Diese wird aus hochlegiertem, rostfreiem Stahl gefertigt. Das hohe Anzugsmoment von 40Nm welches mittels eines 10mm-Innensechskant aufgebracht wird, sorgt für eine sichere Verbindung. Speziell geformte Alu-Inserts wurden hierzu in den Carbonrahmen laminiert, welche mit robusten Gewindeeinsätzen aus Stahl versehen sind.

Since the service life of the ball bearings is more influenced by penetrating dirt than by extreme loads while riding, the SUBMARINE MAIN-PIVOT is utilized. Inside, there are flange bearings filled with 20% more lubricant and equipped with heavy-contact-sealings. These flange bearings also significantly facilitate the bearing replacement. Externally, the bearing is additionally protected against environmental influences with a FKM-rubber cap. Towards the main frame, a radial shaft seal and a spacer with an integrated O-ring ensure the highest sealing values. The main bearing bolt has also been redesigned. It is made of high-alloy stainless steel. It is tightened with a 10mm Allen key (40Nm). To accommodate this tightening torque with a low frame weight, a specially shaped aluminum insert is laminated. The thread inserts made of steel are screwed into the insert provide additional protection to the thread in the frame.



INTERNAL

full covered cable routing from the top to the end

Advanced cable sealing.

Small and simple chainguide.

Special shaped CS-protector with air bumps for a silent ride.

The advanced shape at the rear covers the hole if you don't have any cables, and seals if you route a cable through.

CHAINGUIDE

Um sicher zu stellen, dass die Kette auch bei härtesten Belastungen und Schlägen am Kettenblatt bleibt, ist der EVO III mit einem unauffälligen, aber dafür umso wirksameren Chainguide ausgestattet.

To ensure that the chain stays on the chainring even under the toughest loads and impacts, the EVO III is equipped with a discreet yet highly effective chainguide.

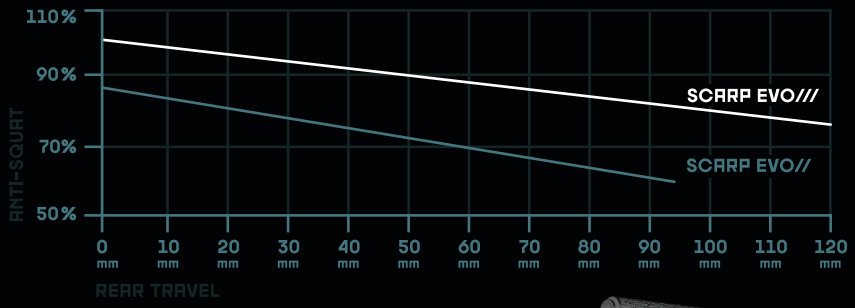
ADVANCED CABLE SEALING

Spezielle geformte Silikon-Röhrchen zwischen vorderem und hinterem Rahmendreieck sorgen für besten Schutz gegen eindringenden Schmutz und Feuchtigkeit. Weiters verdeckt bzw. umhüllt der Kettenstrebenschutz Einlässe an der Kettenstrebe und dichtet diese ab.

To prevent the penetration of dirt into the frame as effectively as possible, the internal cable routing has been further developed. Special silicone tubes between the front and rear frame triangle provide optimal protection. The chainstay protector covers or wraps around the holes on the chainstay and seals them.

ADVANCED KINEMATIC

MORE ANTI-SQUAT



Der Wunsch unserer KTM-Weltcup-Athleten nach mehr Anti-Squat wurde im EVO III Rahmen konsequent umgesetzt. Unerwünschtes Einsacken beim harten Antritt wird noch besser eliminiert. Im Vergleich zum Vorgängerrahmen um über 20%.

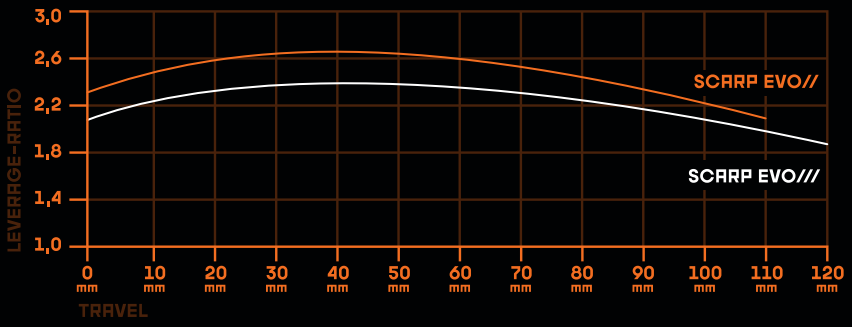
Multiple times, the KTM World Cup athletes expressed the desire for more anti-squat. This prevents the undesired sinking into the suspension travel. Compared to the previous frame, this value has been increased by over 20%.

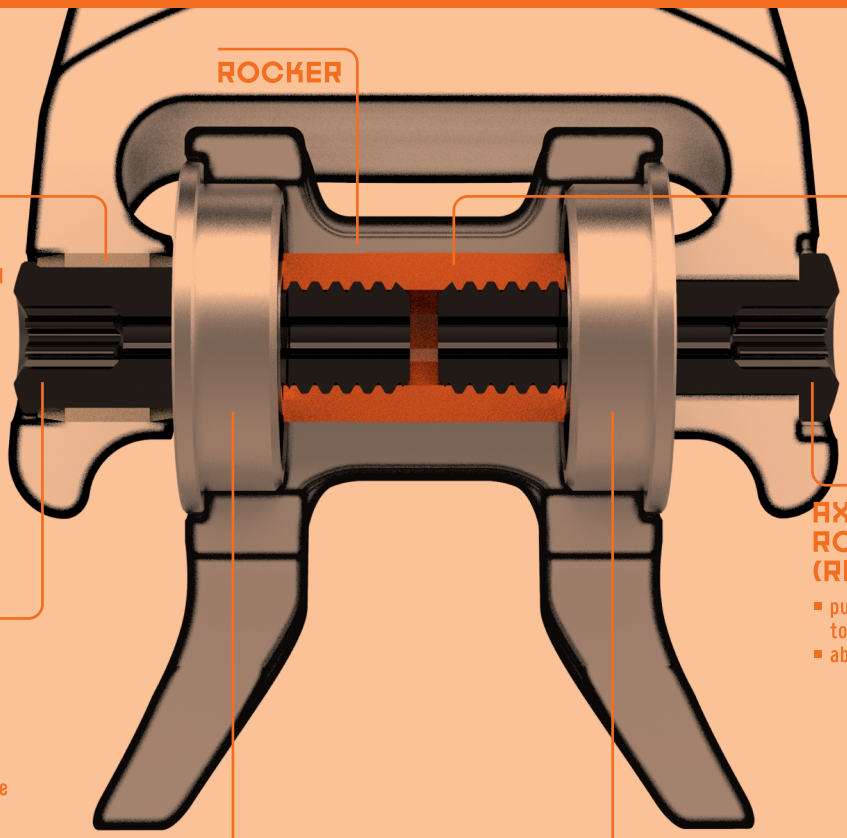
GEOMETRY UPDATE

Um den breiten, hoch performanten Einsatzbereich gerecht zu werden, wurde die Geometrie noch weiter verfeinert. Dabei wurde der Lenkwinkel um 1° flacher, der Sitzwinkle um 0,5° steiler definiert. Die Oberrohrlängen sind um 10mm gewachsen, wodurch sich der Reach von 458 auf 474mm und der Stack von 605 auf 603mm (RH L/48/ 100mm Federweg) verändert.

To cater to all use cases, the geometry has been further optimized. The head angle is 1° flatter, and the seat angle is designed 0.5° steeper. The top tube lengths have grown by 10mm, resulting in a reach change from 458 to 474mm and a stack change from 605 to 603mm (frame size L/48/ 100mm travel).

MORE LOWER LEVERAGE-RATIO





IGUS

- Igus JVSM_1012_10 eliminates the play between the screw and the frame
- guaranties the best radial fit/radial force transmission

ROCKER-SPACER

- with M6-thread and hexagon middle part for mounting

AXLE ROCKERMOUNT (RIGHT)

- pulls the bearing/rocker to the frame
- absorbs radial and axial fores

AXLE ROCKERMOUNT (LEFT)

- absorbs radial forces only
- avoids in combination with the Igus JVSM the deformation of the bearings and eliminates the influence of frame tolerances

BEARING WITH FLANGE

- 90% infill
- heavy-contact sealings
- easier replacement

MAGIC ROCKER-ADJUSTMENT

Keine Toleranzen und kein Spaltmaß. Durch den Einsatz eines Igus-Gleitlagers weist die Montage des Rockers ein Los- und ein Festlager auf. Die verbauten Wälzlager sind somit spannungsfrei im Rocker verbaut. Auch diese Flanschlager sind mit einer extra Portion Schmierstoff sowie mit heavy-contact-sealings gerüstet.

No tolerances and no gap allowance. By using an Igus plain bearing, the assembly of the rocker features a floating bearing and a fixed bearing. This ensures that the installed ball bearings in the rocker are not axially tensioned. For the rocker as well, flange bearings with more lubricant and heavy-contact-sealings are used.

AUTOMATISCH SCHALTEN MIT SHIMANO
AUTOMATIC SHIFTING WITH SHIMANO

Fließend fahren im richtigen Gang
Mit eShift sind Gangwechsel einfacher und effizienter – und sie passieren fast von allein. Je nach eShift Variante kannst du selbst schalten oder eShift schaltet automatisch so, dass du in deinem individuellen Wohlfühlbereich gleichmäßig trittst. Stelle einfach deine Wunsch-Trittfrequenz in der eBike Flow App oder direkt am Display einund eShift schaltet automatisch. eShift reagiert jetzt direkter auf Steigungen, wechselt entsprechend der Fahrdynamik schneller die Gänge und schaltet harmonischer – angepasst an den Untergrund, auf dem du fährst.

Ride smoothly in the right gear
With eShift, gear changes are easier and more efficient - and they happen almost automatically. Depending on the eShift variant, you can shift gears yourself or eShift shifts automatically so that you pedal smoothly in your individual comfort zone. Simply set your desired cadence in the eBike Flow app or directly on the display and eShift shifts automatically. eShift now reacts more directly to climbs, changes gears more quickly based on the riding dynamics, and shifting is better adapted to the surface you are riding on.

So funktioniert's:
1. Aktualisiere dein eBike mit dem smarten System per eBike Flow App oder bei deinem Fachhändler.
2. Führe ein Update für deine Shimano-Schaltung über die E-TUBE PROJECT Cyclist App durch oder wende dich dafür an deinen Fachhändler.

How it works:
1. Update your eBike with the smart system via the eBike Flow app or through your local dealer.
2. Update your Shimano gears using the E-TUBE PROJECT Cyclist app, or consult your trusted dealer for assistance.

[1] Higher performance values also mean higher wear and lower range. You can customise the performance values as you wish in the eBike Flow app.

[2] The eBike manufacturer can limit the maximum performance values. In the eBike Flow app, eBike riders can then only set the maximum values specified by the manufacturer.

[3] The maximum support depends on the selected riding mode and its customisation as well as the rider power.
